Haechi: Executive Summary

Product: Haechi

Date: March 2026

Prepared for: Executive Leadership, Investors, Strategic Partners

1. The Opportunity: Securing the Future of Enterprise Communications

The global enterprise secure communications market, valued at £12.4 billion and growing, faces unprecedented challenges. The advent of quantum computing threatens to render current encryption methods obsolete, while sophisticated nation-state actors are already exploiting vulnerabilities in traditional VPNs through advanced traffic analysis. This creates an urgent and unmet need for a new generation of secure communication platforms.

Haechi is positioned to capture this critical market. It is a next-generation secure communications platform designed for enterprises, government contractors, and critical national infrastructure (CNI) operators who demand verifiable, provably anonymous, and quantum-resistant network communications. Unlike existing solutions, Haechi addresses the converging threats of quantum decryption, advanced traffic analysis, and centralized trust architectures simultaneously.

2. Haechi: A Paradigm Shift in Security

Haechi delivers three core innovations that collectively establish a new standard for enterprise security:

Innovation	Business Value Proposition
Zero-Knowledge Orchestration (ZKO)	Eliminates the risk of identity compromise by ensuring user authentication and network access without storing or transmitting sensitive credentials. This provides an unparalleled level of privacy and security, making "no-logs" a cryptographic guarantee, not just a policy.
Post-Quantum Cryptography (PQC)	Future-proofs enterprise communications against the threat of quantum computers by integrating NIST-standardized quantum-resistant encryption. This protects long-duration confidential data from future decryption by adversaries.

AI-Driven Traffic Obfuscation	Defeats advanced traffic analysis and Deep Packet Inspection (DPI) by dynamically morphing network traffic to appear statistically indistinguishable from benign internet activity. This prevents adversaries from inferring organizational structure or operational intent from communication patterns.

These innovations provide a robust, multi-layered defense that surpasses any currently available commercial product, offering peace of mind and regulatory compliance for the most sensitive operations.

3. Market & Revenue Potential

Haechi targets a significant and growing market, with a multi-revenue B2B2C model designed for capital efficiency and reduced concentration risk. Our addressable market includes:

- **Global Enterprise VPN Market:** A £44.6 billion market by 2025, with a 14.3% Compound Annual Growth Rate (CAGR).
- **UK Defence & CNI Procurement:** Mandatory secure communications upgrades driven by legislation such as the Telecommunications (Security) Act 2021.
- **Premium B2C Segment:** Growing demand from high-value individuals (e.g., legal professionals, journalists, financial advisors) for provably private communications.

Our Year 3 revenue target is £11.5 million ARR, with strong gross margins across all segments. This will be achieved through a diversified approach including enterprise SaaS licenses, managed service contracts for defense and government, dedicated CNI deployments, and a premium B2C subscription tier.

4. Strategic Alignment & Defensibility

Haechi's development aligns directly with the UK National Cyber Strategy 2022, addressing critical gaps in quantum-resistant communications infrastructure. Our strategic advantages include:

- **Original UK R&D:** Significant intellectual property with three independently patentable innovations.
- **Regulatory Alignment:** Designed for compliance with UK law and NCSC guidance, creating a competitive moat in government and CNI markets.

- **Data & Network Effects:** Continuous improvement of our AI models through deployment data and enhanced threat intelligence from our Global Intelligence Mesh, creating a compounding advantage.

5. Investment Opportunity

Quantumind is seeking **£3.2 million in seed funding** to complete the 18-month R&D and commercialization program for Haechi. This investment will enable us to:

- Finalize core technology development, including our AI traffic morphing, ZKP authentication, and PQC gateway.
- Build a production-ready platform and DevSecOps pipeline.
- Drive commercialization efforts, secure initial enterprise contracts, and file key patents.
- Scale our highly skilled R&D and engineering team in the UK.

Haechi represents a timely and strategic investment in the future of secure communications, offering substantial returns by addressing an urgent global security imperative with groundbreaking technology and a robust business model.
